STYLELINE

One screen. Three distinct looks.

The latest fixed frame projection screen from Draper® offers the performance of multiple screen types in a single versatile screen model. This award-winning screen is packed with features and is easy to order.

The StyleLine is available up to 15' wide (depending on the bezel). Available with two bezel trim options: **Fine Bezel** in 5/8" or **Bold Bezel** in 3 3/16" with mitered corners for a clean, finished look. Or, opt for an **borderless version** for no visible frame around the viewing surface.

The StyleLine is light and **installer-friendly** thanks to a quick-connect subframe. The flexible viewing surface attaches easily to the frame with simple **hook and loop**. It also offers horizontal and vertical surface tension adjustability.

The aluminum frame features a **back channel** for attaching popular LED backlighting. Both bezels are covered with Vel-Tex, a black, **velvety textile** that eliminates light reflections from projector overscan.

The Science Behind the Screen

The StyleLine is available with the full line of flexible Draper viewing surfaces, including 8K-ready TecVision® premium viewing surfaces.

TecVision surfaces are available in three categories:

- **Whites** for dark home theaters
- **Greys** for increased contrast in controlled light
- **Ambient Light Rejecting (ALR)** for uncontrolled light in multi-use spaces

All TecVision surfaces are certified color-accurate by the Imaging Science Foundation (ISF).
